

Stainless Steel

Packaging Equipment

INTRODUCING

The Industry's Most Innovative Washdown Packaging Systems

Combi constructs stainless steel washdown packaging equipment for the food, dairy, meat, chemical and pharmaceutical industries. Corrosion-resistant systems for harsh environments are also available. All Combi washdown equipment is constructed to withstand regular water spray on all external components. The simple, open design allows for fast changeovers and quick and easy decontamination of all exposed surfaces. All electrical enclosures, motors, and other components are NEMA 4 rated.

Heavy-duty welded tubular stainless steel framework

NEMA 4 compliant washdown electrical

EZ Load Walk-In Case Magazine allows you to load cases easily, without interrupting the operation of the machine

Ergonomic design reduces unnecessary reach and wrist movement

NEMA 4 compliant electrical motors

Ergopack® Pack Faster, Pack Smarter

The Ergopack combines the functions of case erecting, packing and sealing into a compact and cost-effective workcell. With our patented hands-free indexing system, the operator never touches the case. The product is transferred into the case from the integrated product conveyor. The filled case is then automatically indexed through the top and bottom case sealer. The entire packaging operation is accomplished with far fewer movements and less reach distance, greatly reducing the risk of repetitive stress injuries.

2-EZ[®] Case Erector/Bottom Taper

The 2-EZ case erector/bottom sealer is available with heavy-duty stainless steel framework and water washdown components. Featuring Combi's EZ-load walk-in case magazine, patented slideout tapehead, and 2-minute "No Tool" changeover system, the 2-EZ is designed for minimal downtime and years of dependable service. The 2-EZ erects a wide variety of cases and instantly increases productivity in any packaging operation.

DP Drop Packer

Ultra-compact case packer with integrated case erector

Stainless Steel Equipment Features

- Heavy-duty welded tubular stainless steel framework
- 304 grade stainless steel covers and components
- All NEMA 4 rated electrical components
- Fully enclosed washdown-rated motors and control stations
- All stainless steel case and product contact parts
- Stainless steel fasteners
- Contamination-resistant conveyor chain
- Stainless, anodized, or powder-coated internal components

SPP Servo Place Packer

Top load pick and place case packer featuring multi-axis robot

TBS-100 Sealer

Heavy-duty top and bottom case sealer

Complete Packaging Solutions

For over 20 years, Combi has been providing case erecting, loading and sealing equipment for the food, beverage, pharmaceutical and chemical industries. Combi systems feature heavy-duty construction, easy setup, and a simple design for years of trouble-free operation.

Combi has a proven track record in facilities all over the world, offering a single source for design, fabrication and assembly of complete packaging lines. With integration services included and extensive product line capabilities through our partners, Combi offers a broad range of equipment for complete end-of-line packaging solutions.

Combi Packaging Systems LLC is a joint venture with 3M and Siat S.p.A.
